

# Information about the infoBoard planning board

## The planning board is key to your business processes

infoBoard is the best scheduling and planning solution for your work order, routing and tasks. You can easily plan your resources by graphically updating the planning board objects (tasks) variables, e.g. duration, date/time, dependencies, downtimes and status. Therefore, all users get up-to-date information via their autorefreshed screens. In addition, several infoBoard apps with synchronized information, complement and support the operations with unique and specialized functions.
